

DIGITAL LITERACY PORTFOLIO REPORT

Student Details

- **Name:** Prajjwal Pandey
- **Registration Number:** 25BAI11515
- **Branch:** CSE With AIML
- **Year:** First Year
- **Course Code:** CSE0001
- **Date:** 31 March 2026

Introduction :-

In today's digital era, being digitally literate is not just a skill but a necessity. This project was designed to help students understand how to navigate the online world safely, responsibly, and professionally. As a Student Digital Ambassador, my role was to create awareness among peers about digital tools, online presence, cybersecurity, and communication etiquette.

Through this project, I completed five structured tasks that focused on different aspects of digital literacy, including infographic creation, portfolio building, coding platforms, professional communication, and cybercrime awareness. Each task provided practical experience and helped me understand real-world applications of digital skills. This report documents my work, learning outcomes, and reflections from each module.

Task 1: Digital Literacy Awareness Infographic :-

For this task, I created a one-page infographic using **Canva**, a popular and user-friendly design tool. The infographic focuses on explaining the concept of digital literacy and its importance for students. It covers key topics such as what digital literacy is, useful digital tools, maintaining a professional online presence.

The design was structured in a visually appealing way with icons, headings, and concise points to make it easy to understand. I ensured that the content was simple yet informative so that even beginners could grasp the concepts quickly. The use of colors and layout helped highlight important sections like cybersecurity tips and professional behavior online.

One challenge I faced was balancing design and content. It was difficult to include enough information without making the infographic overcrowded. However, this helped me learn how to prioritize key points and present information effectively. Overall, this task improved my creativity and communication skills.

Task 2: Student Digital Portfolio :-

In this task, I created and updated my professional presence across multiple platforms, including **GitHub, LinkedIn, and Kaggle**. These platforms are essential for students as they showcase skills, projects, and achievements to potential employers and academic communities.

On GitHub, I created a profile README that includes my name, branch, year, and learning goals. On LinkedIn, I updated my education details, added skills, and ensured that my profile looks professional. Kaggle was used to explore data science-related content and improve my analytical skills.

This task helped me understand the importance of building a strong digital identity. Employers often check online profiles before hiring, so maintaining a clean and professional presence is crucial. I plan to regularly update these platforms by adding projects, certifications, and achievements over the next four years. This will help me build a strong portfolio and improve my career opportunities.

Task 3: Coding & Collaboration Platforms :-

For this task, I explored both coding practice platforms and collaboration tools. I chose **HackerRank** as my coding platform and completed a beginner-level challenge to strengthen my programming fundamentals. This helped me improve logical thinking and problem-solving skills.

In addition, I created a **Digital Literacy Awareness Quiz** using Google Forms. The quiz included five questions, combining multiple-choice and short-answer formats. It was designed to test basic knowledge of digital safety, online behavior, and cybersecurity. I also reviewed the response sheet generated in Google Sheets, which provided insights into user responses.

This task was very practical as it combined technical and collaborative skills. Coding platforms help improve programming abilities, while tools like Google Forms are useful for surveys, quizzes, and academic collaboration. These tools will be highly beneficial in my academic journey, especially for projects, teamwork, and assessments.

Task 4: Professional Email & Etiquette :-

In this task, I drafted two professional emails: one requesting an assignment extension and another expressing interest in a summer internship. Both emails followed proper structure, including a clear subject line, formal greeting, well-organized body, and polite closing.

Additionally, I created a checklist of social media do's and don'ts for responsible online behavior. This included guidelines such as maintaining professionalism, avoiding oversharing, and respecting others online.

One important learning from this task was how poor communication can lead to misunderstandings or missed opportunities. For example, sending an unclear or informal email to a professor can create a negative impression. To avoid this, communication should always be clear, respectful, and professional.

Task 5: Cybercrime Awareness :-

While working on cybercrime awareness, I explored the topic of **UPI/Online Payment Fraud**. I learned how scammers use phishing links, fake calls, and social engineering techniques to trick users into sharing sensitive information like OTPs and PINs.

One surprising aspect was how easily people fall victim to these scams due to lack of awareness. Even educated users can be targeted through well-crafted fraud techniques. This highlights the importance of staying alert and verifying information before taking action.

As a result of this task, I will personally ensure that I never share sensitive information like OTPs or banking details with anyone. I will also educate others about safe online practices and encourage them to report fraud through official channels like the National Cyber Crime Portal and helpline 1930.

Conclusion :-

This Digital Literacy Portfolio project was a valuable learning experience that enhanced my understanding of digital tools, online safety, and professional communication. It helped me develop practical skills such as creating digital content, building an online presence, and identifying cyber threats.

The project also emphasized the importance of responsible digital behavior and continuous learning in a rapidly evolving technological world. Overall, this experience has prepared me to become a more informed and responsible digital citizen, and I am confident that these skills will benefit me in both my academic and professional journey.
